

Introduction to the Frequency Lists

CAFL The Consolidated Annotated Frequency List. The most popular frequency list. It is the Master List and probably the most-used reference for frequency researchers.

Non-Consolidated Frequency List This contains separate lists of frequencies from many sources. It also contains 2 frequency lists that the CAFL does not incorporate - frequencies for muscles in the body and for chemical elements. It is not updated and was compiled circa 1998.

Frequency Cross Reference - Lists frequencies with the conditions they are used for. This list may not reflect all of the frequencies in the CAFL and is not kept updated. See Stone Circle Alternatives for the latest list in a well-formatted version. Useful to see if there are matches when hits occur during scanning or when the purpose of a frequency being used is forgotten.

Warning: This information is not intended to diagnose or treat any illness or medical condition and is for educational and historical purposes only.

The two major Electroherbalism Frequency Lists are the Consolidated Annotated Frequency List (CAFL) and the Non-Consolidated Frequency List (NCFL). The NCFL was compiled first. It consists of various and sundry frequency lists collected over the years. Anecdotal frequencies posted to some of the internet rife listservers have also been collected since the early days of the internet. These were stored in the Electroherbalism archives. In the late 1990's, an effort was made to consolidate all of these frequency lists along with the anecdotal frequencies, some well tested and some not, into a single list. Some basic annotations were added, it was put into tabular form, and the CAFL was born.

The CAFL contains the frequencies from many sources combined into one list. Besides the anecdotal frequencies which can not be found on any other list, it includes early Garvey sets (some which have been converted for use on audio range devices like Rife-Bare machines and EMEMs) as well as more modern frequency sets from researchers such as Don Tunney of Resonant Light Technology and Michael Tigchelaar of TrueRife. A problem with the CAFL is that the sets for even minor maladies can be quite long. However, all frequencies found were included in the hope that at least one in a set would be beneficial.

Since the NCFL is composed of many of the original lists which were combined to produce the CAFL, it can be valuable for viewing concise frequency sets. It does not contain anecdotal frequencies, some of which are the most beneficial since they have been developed most recently. The NCFL does contain frequencies and other information not included in the CAFL, including empirical muscle frequencies, mineral frequencies, original Royal Rife frequencies, Hulda Clark's frequencies converted into audio range, and lists of "codes" for function generators which hide the frequencies from the user.

The frequencies in these lists are not well tested. Some are from pad device sets, some are from homeopathic nosodes, some may be what worked for a single researcher, and some may be mere speculation. Do not stake life or health on them. They are a starting point for research.

There are other frequency lists such as the Crane and Keelynet lists, but these were mostly excluded from the Electroherbalism lists since they are generally composed of different combinations of general frequencies that are typically run often, i.e., 20, 728, 784, 800, 880, 5000, 10000Hz. This is **not** to say these frequencies are not important – they are in general the **most** important frequencies that address the most common pathogens and conditions, so are widely used in many sets, especially general frequency sets.

Many of the frequency sets address the symptoms and only marginally if at all the cause, just like in allopathic medicine. For example, the IBS (irritable bowel syndrome) frequency set may help balance gut bacteria levels and perhaps alleviate some intestinal spasms, but may not include the frequencies for giardia or other parasites, which could be a factor. The hepatitis C set does not include the frequencies for the blood fluke, schistosoma mansoni, which may be a factor in some if not most cases, according to Hulda Clark's research. Same with chlamydia, herpes 6, and parasites as being potential causative factors in MS.

The CAFL attempts to deal with this problem by providing notes of other frequency sets which may help. Despite filtering, some of the sets contain only general frequencies such as 727/728, 784/787, 464, and 880 when those are the only ones which have been used and found to help. These four frequencies do address a wide range of bacteria, viruses, and fungi. In this respect they may nonetheless help almost any infectious process by removing common pathogens and therefore assisting the immune system since there will be more cells available to concentrate on the "uncommon" pathogens which were not directly addressed in the set. Many people run these four general frequencies in every set regardless of the condition.

Frequencies in the 2000-2200 range are thought to increase the activity of the immune system cells as well as improve blood circulation, so these can also be helpful in any infectious disease, even if they do not address a condition directly. When there is limited time and one will run a session which must include frequencies for many different maladies, some experienced users choose the concise Garvy frequencies from the along with a basic set of 728, 784, 880, and 464. Garvy frequencies are listed separately in the NCFL. When there is plenty of time, one might run the complete set from the CAFL along with any causative factor sets which are listed.

Hulda Clark's frequencies may be useful if a specific pathogen is known. These frequencies are in the 80- 900 KHz range, so cannot be run directly on most Bare-Rife generators or EMEM devices. The most common method used to convert frequencies which are too high to run on an audio range device is to divide by two until the frequency is in range. This method can also be used on Garvy frequencies which are out of range. Pad devices can usually run these higher frequencies directly, which may be of benefit.

Another method used to convert out-of-range frequencies is described by Rife researcher Jeff Sutherland. He asserts that it is much more effective to divide the frequencies by the constant e (2.71828183) raised to the 3rd or 6th power. A list of Hulda Clark frequencies converted into audio range using this method is provided in the NCFL.

Most people run frequencies three minutes each. For a 20 frequency set, this would be an hour long session. Higher powered devices (100W+) may require less time on each frequency. When a frequency is found to be particularly beneficial it may be run for a longer time after assessing detox reaction to ensure it is not too strong. Scans and sweeps can be effective for determining new frequencies, as well as therapeutic in themselves. Running scans is feasible only with a programmable function generator since manually entering a single frequency every few seconds hundreds of times in a session is not practical. Some of the best ranges for scanning are 300-800 and 2000-2600Hz. Each frequency in a scan is run for 1 to 10 seconds. Any "hits" are noted and after the session these frequencies are run for a full three minutes each. Hits are any frequencies which cause a sensation, such as tingling, pulsing, tickling, itching, etc.

Note that many times (if not most of the time) frequencies which are beneficial may not cause any sensation. And, many times frequencies which are "hits" may cause no apparent benefit. In general, though, frequencies which produce consistent hits over multiple sessions are usually therapeutic, and should be included in sessions until they no longer do. If any frequencies are found to be particularly effective and are not yet listed for a condition, please report them to turf@mindspring.com for possible inclusion in the CAFL or a Frequency Anecdote file.

Values in the lists are given in Hz unless otherwise noted. There is, in general, nothing special about the order of the frequencies inside frequency sets. This data was compiled from many electronic sources verbatim (except for some annotations) and there is no guarantee of any beneficial effects - most sources of the data were questionable but all frequencies found were included in the hope that at least one in any given set would be helpful.

Sets in the CAFL with a numbered annotation such as `_1` or `_2` are anecdotes and often contain newly discovered frequencies so may be the most effective in some cases. Frequencies marked with an asterisk (*) in the comments section are thought to be particularly effective. Sets appended with `_v` are Vega sets, many originally developed by John Garvy of the Son Ridge Health Center as well as his successor, Peter Kapetanakos of the Carolina Health Center (www.carolinahealthcenter.com). Set names appended with `_TR` are courtesy of TrueRife.com. Sets appended with `_HC` are scalar harmonics of Hulda Clark frequencies converted to audio range. Sets appended with `_comp` are comprehensive sets which include most or all of the frequencies for that condition. Sets marked with "secondary" and "tertiary" are those which may be helpful to increase the effects of the main set or to address less common causes of the disorder. "See other" sets, listed in the comment sections, indicate those sets that may be helpful as a compliment. "Use other" sets indicate both alternate nomenclatures for listings as well as additional sets which may be necessary to thoroughly address the problem.

The Non-Consolidated Frequency List

NCFL, v2007-05-16

The Non-Consolidated Frequency List, or NCFL, is a compilation of frequency lists from many different sources. Some sets are excluded from this compilation such as the Keelynet and Crane lists which merely specify for almost every ailment the general frequencies of 728, 784/787, 880, 5000, 10000, 800, 20. These frequencies are important and many people run them with every set as an adjunct.

The NCFL contains some frequencies and other information not included in the CAFL, including empirical muscle frequencies, mineral and metal frequencies, Hulda Clark's original frequencies converted into audio range, frequencies of musical notes, and lists of "codes" for function generators which hide the frequencies from the user.

MORs compiled by Dr. Robert P. Stafford, M.D.

Dr. Stafford was a physician who worked with an original Rife machine from 1957 to 1963:

- | | |
|---------------------------|--|
| Tetanus 120 | Typhoid Virus 1862 |
| Treponema 660 | Bacillus Coli Rod Form 800 |
| Gonorrhea 712 | Bacillus Coli Virus 1552 |
| Staphylococci 728 | Tuberculosis Rod Form 803 |
| Pneumococci 776 | Tuberculosis Virus 1552 (same as B-Coli) |
| Streptothrix (fungus) 784 | Sarcoma (all forms) 2008 |
| Streptococci 880 | Carcinoma (all forms) 2128 |
| Typhoid Bacteria 712 | |

Mid 1990's Rife Researchers' List

The following was posted by an anonymous contributor to one of the early rife lists and is a compilation of what James Bare, Don Tunney, and Hulda Clark were using in the mid 1990's. The following is the verbatim introduction: "Here is a list that I've compiled. The format is frequency, what it supposedly affects, device, source. If the 'device' field says 'theory' it means that someone said this might work, but no-one has actually said anywhere that they've used it. If the 'device' field says 'theory/440' then I took the frequency from Hulda Clark's book "The Cure For All Diseases" and divided by 440."

*802 Hz. It was once thought that 802 should not be used if a healthy colon is involved, as it might kill both beneficial and detrimental bacteria, but later research implies that this is not a problem and 800/802 are run often by many people with no harmful effects.

MORs (Mortal Oscillatory Rates) - This short list includes Rife's original frequencies that he used during several different time periods of his life as well as 1950s era Crane frequencies and Oxyrife's modern frequencies. Crane frequencies are square wave, Rife's and Oxyrife's are sine wave. For Pre 1935, Rife's frequencies are provided in both frequency (hertz) and wavelength of super regeneration (meters), and then the wavelength converted to frequency.

Bio-Energetic Frequency Chart

Please note that although most of the frequencies in this list are derived from homeopathic nosodes [vaccines], allergens, sarcodes [organ therapy preparations], or cell salts, some are directly from the specified ailment or substance. However, this distinction appears inconsequential since bio-energetic frequencies should be effective in either case.

Actinobacillus (a potentially pathogenic bacteria normally found in mammals): 773

Actinomyces israelii (a bacterium normally found in the bowel and throat that causes deep, pus-filled holes in tissue): 222, 262, 2154

Adnexitis (swelling of the ovaries or Fallopian tubes): 440, 441, 522, 572, 3343, 3833, 5312

Adenoma, cervical (epithelial tumor of the cervix that can be either benign or malignant): 433

Adenovirus (a virus that causes infections in the lungs, stomach, and intestines): 333, 523, 786
Aflatoxin (a liver-damaging toxin produced by certain food molds): 344, 510, 943
AIDS: Kaposi's sarcoma: 249, 418
Alternaria tenuis (a fungus associated with lung ailments): 853
Amoeba (a single-celled, sometimes-infectious microorganism): 310, 333, 532, 732, 827, 1522
Amoeba hepar abscess (liver abscess caused by amoebic infection): 344
Anthraxinum (homeopathic anthrax nosode): 633
Aremes tennus: 667
Arnica (a healing herb): 1042
Arsenic alb. (homeopathic cell salt): 562
Aspergillus flavus (mold found on corn, peanuts, and grain that produces aflatoxin): 1823
Aspergillus glaucus (blue mold occurring in some human infectious processes): 524
Aspergillus niger (common mold that may produce severe and persistent infection): 374
Aspergillus terreus (mold occasionally associated with infection of the bronchi and lungs): 743
Asthma: 1233, 1283
Astrocytoma (common tumor of brain and central nervous system): 857
Bacillus subtilis (homeopathic nosode from a bacterium that can cause conjunctivitis): 432, 722, 822, 1246
Bacillinum (homeopathic nosode): 132, 423, 432, 785, 853, 854, 921, 1027, 1042, 1932
Bacterium lactis nosode (homeopathic): 512, 526, 798, 951, 5412
Bacterium coli (a type of E. coli normally found in the intestines, water, milk, and soil that is the most frequent cause of urinary-tract infections and a common cause of wound infection): 642
Bacterium coli commune (E. coli) combination: 282, 333, 413, 957, 1320, 1722
Bakers' yeast (homeopathic preparation for an allergen): 775
Banti's syndrome (A serious ailment in which blood vessels between the intestines and the liver become blocked, leading to congestion of the veins, an enlarged spleen, bleeding of the stomach and intestines, cirrhosis of the liver, and blood cell destruction.): 1778
Barley smut (homeopathic preparation for an allergen): 377
Bermuda smut (homeopathic preparation for an allergen): 971
Biliary cirrhosis (an inflammatory condition in which bile flow through the liver is obstructed): 381, 514, 677, 2271
Bilirubin (a bile pigment that may result in jaundice in high concentrations): 717, 726, 731, 863
Bladder TBC: 642, 771
Blastocystis hominus: 365, 595, 844, 848, 1201, 1243
Blue cohosh (a healing herb): 364
Borreliosis (Lyme disease, relapsing fever in humans and animals caused by parasitic spirochetes from ticks): 254, 345, 525, 605, 644, 673, 797, 884, 1455

Botrytis cinereas (a homeopathic preparation from a fungal allergen): 1132
Botulinum (a bacillus that causes an often fatal form of food poisoning): 518, 533
Brain tumors:
astrocytoma (common tumor of brain and central nervous system): 857
gliomas (largest group of brain cancers): 543, 641
Branhamella (Moraxella) catarrhalis: 2013
Bronchiectasis (chronic dilatation of the bronchi): 342
Bronchopneumonia borinum (a form of bronchial pneumonia): 452, 1474
Brucella abortus (undulant fever or Bang's bacillus, found in cattle): 1423
Brucella melitensis (form of Brucella found in goats and sheep): 748
Campylobacter (bacteria causing sudden infectious diarrhea in newborns): 732, 1633, 1834, 2222
Cancer:
adenoma, cervical: 433
astrocytoma (common tumor of brain and central nervous system): 857
bronchial: 462, 852, 1582
colon: 656
fibrosarcoma (develops rapidly from small bumps on the skin): 1744
gliomas (largest group of brain cancers): 543, 641
Hodgkin's disease (a cancer of the lymphatic system that is both chronic and progressive): 552, 1522
Kaposi's sarcoma: 249, 418
leukemia (starts with the bone marrow but eventually involves all body organs):
feline (cat): 424, 830, 901, 918
"hairy cell" (typified by abnormal blood cells & shortage of others): 122, 622, 932, 5122 (could be 1522)
lymphatic: 478, 833
mycloid (characterized by rapid growth of incompletely-formed white blood cells): 422, 822
T-cell: 222, 262, 822, 3042, 3734
mycosis fungoides (a form of skin cancer resembling eczema): 852
plasmacytoma (plasma-cell tumor): 475
liver, fermentative: 214
uterine, fermentative: 127
Candida (a genus of yeastlike fungi normal to the human body but capable of harmful overgrowth): 866
tropicalis: 1403
Canine parvovirus: 185, 323, 562, 613, 622, 1000, 4027

mutant strain: 323, 514
type B: 323, 535, 613, 755
Carbo animalis (homeopathic remedy from animal-bone charcoal): 444
Carcinoma (any cancerous tumor starting with cells covering body and organ surfaces that then invade both local and distant areas)
bronchial: 462, 852, 1582
colon: 656
liver, fermentative: 214
uterine, fermentative: 127
Carvularia spirifera: 879
Cataract
brunescens (brown opacity in later life): 2010, 1335, 1830
complicated (secondary type caused by disease, degeneration, or surgery): 496
Causticum (a homeopathic remedy): 540, 1013
Celia carroll: 576, 973
Cephalosporium (fungi that are the source of some broad-spectrum antibiotics): 481, 3966
Cerumen (ear wax): 311, 320, 750, 984
Cervix adenoma (epithelial tumor of the cervix): 433
Chaetomium globosum: 221, 867
Chemicals:
methotrexate: 584
green dye: 563, 2333
Chicken pox: 787, 3343
Chlamydia (a sexually-transmitted bacterial infection): 430, 620, 624, 840, 2213
Cholera (an extremely contagious and serious bacterial infection of the small intestines): 330, 843, 844, 1035
Cholecystitis
acute (excruciating gallstone attack): 481, 743, 865, 928
chronic (long-term inflammation of the gallbladder): 432
Cholesteatoma (benign tumor usually found in middle ear & mastoid region): 453, 618, 793
Cimicifuga (plant family including black snakeroot and black cohosh): 594
Cirrhosis, biliary (an inflammatory condition in which bile flow through the liver is obstructed): 381, 514, 677, 2271
Cladosporium fulvum (a pathogenic fungus): 438
Coelicia: 154, 594, 656
Condylomata (venereal warts caused by infectious papilloma virus): 466

Corn smut (homeopathic preparation for an allergen): 546, 1642

Coxsackie virus (produces disease resembling non-paralytic polio): 136, 144, 232, 380, 422, 424, 435, 921, 923

type B1: 834

type B2: 705, 534

type B4: 421

type B5: 462, 1043, 1083

type B6: 736, 814

CMV (cytomegalovirus known as salivary gland virus or human herpes type 5): 126, 597, 1045, 2145

Crinis humansis: 646

Critter 1: 1033

Critter 2: 421, 1035, 1111

Crocus sotillus: 710

Cryptosporidium (parasitic protozoa infrequently causing diarrhea in humans): 482, 575, 4122

Cyst, ovarian: 982

Cystic fibrosis (Also called mucoviscidosis, this is an inherited disorder of the exocrine glands that causes them to release very thick mucus): 523

Cystitis, chronic (long-term inflammation of the urinary bladder and ureters): 246

Cystopyelo nephritis (inflammation from bladder to kidney): 1385

Dematium nigrum (soil fungi found in human lesions): 243

Dental: 635, 640, 1036, 1043, 1094

Diphtherinum (homeopathic nosode for diphtheria): 624

Distemper: 242, 254, 312, 442, 551, 573, 624, 671, 712, 940, 1269, 1950

Diverticulosis (characterized by tiny hernias of intestinal tissue protruding through the muscular wall of the colon): 154, 934

Drogloma (a brain tumor): 853

E. coli (Escherichia coli; a major cause of infections in wounds and the urinary tract): 282, 333, 413, 957, 1320, 1722

Ear wax: 311, 320, 750, 984

Echinococcinum (homeopathic remedy for tapeworms found in dogs, wolves, cats, & rodents that can infect man): 164, 453, 542, 623

Echo virus (causes a type of meningitis): 620

Encephalitis (inflammation of the tissues of the brain and spinal cord): 841

Endometriosis, chronic (growth of uterine tissue outside the uterus that may cause pain, infertility, & abnormal uterine bleeding): 246

Entamoeba histolytica (highly damaging protozoa causing dysentery and liver infection): 148, 166, 308

Enterohepatitis (inflammation of bowel & liver): 552, 932, 953

Enterobiasis (intestinal worms frequently found in children): 773, 827, 835, 4152

Enterococinum (homeopathic nosode for Strep-family organisms found in the digestive and urinary tracts): 686

Epicoccum: 734

Epidermophyton floccinum (homeopathic remedy for fungus that attacks skin & nails, includes athlete's foot): 644, 766

Epstein-Barr virus (the herpes virus causing mononucleosis): 105, 172, 253, 660, 663, 669, 744, 825, 1032, 1920

Erysipelas (a human bacterial infection manifesting in the skin and possibly related to the swine form of the disease): 616, 845

Escherichia coli (E. coli; a major cause of infections in wounds and the urinary tract): 282, 333, 413, 957, 1320, 1722

Fasciola hepatica (liver fluke of herbivorous animals occasionally found in humans): 143, 275

Febris wolhynia (a Rickettsia illness, transmitted by lice, that is debilitating and conducive to relapse): 547

CHEMICAL COMPOSITION OF THE HUMAN BODY

The Larmour frequencies @ 2.3488 Teslas. The frequencies at 500 and 539 milligauss were calculated based upon changes in magnetic flux density. When a number appears before the atomic symbol, it represents the approximate atomic weight.

Table of Frequency Codes vs. Actual Frequency for coded function generators which hide the frequencies from the user.

1 10 KHz	11 1550 Hz
2 1050 Hz	12 1500 Hz
3 3040 Hz Used for pain, along with freq. code 45.	13 1000 Hz
4 2720 Hz	14 880 Hz Use for Streptococci infection.
5 2489 Hz	15 832 Hz
6 2170 Hz	16 802 Hz
7 2127 Hz Major freq. for cancer with #s 8, 14, 17, 20, 22, 24	17 787 Hz
8 2008 Hz [Rife freq. for Sarcoma]	18 776 Hz
9 1800 Hz	19 760 Hz
10 1600 Hz Major freq. used for eye disorders.	20 727 Hz Major freq. used for Leukemia & Staphylococci.
	21 700 Hz

22 690 Hz Major freq. used for Leukemia.	54 35 Hz
23 685 Hz May be helpful for blood clots.	55 28 Hz
24 666 Hz Major freq. used for Leukemia.	56 27 Hz
25 650 Hz	57 26 Hz
26 625 Hz	58 20 Hz Stimulation of Pineal gland.
27 600 Hz Major freq. used for Leprosy.	59 18 Hz
28 465 Hz Major freq. used for fungal & yeast infection.	60 12 Hz To stimulate mental clarity.
29 444 Hz	61 10 Hz
30 410 Hz	62 9.6 Hz Facial toning.
31 380 Hz	63 9.4 Hz Major freq. used for Prostate problems.
32 330 Hz	64 9.35 Hz
33 320 Hz	65 9.2 Hz Balancing/correction of kidney meridian.
34 240 Hz	66 9.1 Hz
35 240 Hz	67 8.25 Hz
36 230 Hz Major freq. used for stroke along with # 78.	68 7.8 Hz Schumann freq.-- psychic healing experements
37 220 Hz	69 7.7 Hz
38 200 Hz	70 6.8 Hz Possible use for muscle spasms.
39 190 Hz	71 6.3 Hz Anger and irritability.
40 160 Hz Use for very rapid relief from headaches.	72 6.0 Hz Here's a good one--Unwillingness to work.
41 148 Hz	73 5.8 Hz Fear, absentmindedness, dizziness.
42 125 Hz	74 4.9 Hz Induce relaxation, meditation & deeper sleep.
43 110 Hz	75 3.9 Hz Unsociable behaviour.
44 100 Hz	76 3.6 Hz Anger and irritability.
45 95 Hz Major freq used for pain, along with #3.	77 3.5 Hz Depression & Anxiety.
46 80 Hz	78 3.0 Hz Major freq used for stroke along with #36.
47 73 Hz	79 2.65 Hz
48 72 Hz	80 2.5 Hz Used for sedative effect.
49 60 Hz	81 1.5 Hz
50 48 Hz	82 1.2 Hz HIV virus--elimination from circulating blood.
51 47 Hz	83 1.1 Hz
52 45 Hz	
53 40 Hz	

84 1.0 Hz	95 31.0 Hz
85 0.5 Hz Toxin elimination, with #'s 87, 88, 1, 14, 17, 20, 58.	96 33.0 Hz
86 1865 Hz Typhoid virus	97 37.0 Hz
87 522 Hz	98 42.0 Hz
88 146 Hz	99 44.0 Hz
89 610 Hz	100 49.0 Hz
90 2005 Hz [close to Rife frequency 2008 for BY microbe (Sarcoma)]	101 500 Hz Bubonic Plague.
91 2025 Hz	102 1850 Hz
92 0.6 Hz	103 450 Hz
93 0.75 Hz	104 440 Hz
94 0.4 Hz	105 428 Hz
	106 660 Hz

Notes:

1. Frequency codes 14, 16, 17, 20 and 28 affect more microbes and conditions than all other frequencies combined.
2. The second most effective group of frequencies is; 29, 42, 45, 48, 58 and 86. These are mainly used for parasites and amoebae.
3. Frequencies in the range of 11 to 29 produce the most rapid response, usually within 6 hours.
4. Frequencies in the range of 60 to 85 are those that seem to occur naturally in the brain. It is thought that behaviour can be influenced with harmonics of those same frequencies during behaviour of the opposite type. For example, to reduce/eliminate anger, one would apply a freq. of 6.3 Hz (code# 71). See comments for those ranges.
5. Any good quality square-wave generator, such as those recommended for use with the James Bare Rife Device, should be able to output most or all of the Actual Frequencies listed in this document.

Following is the frequency set, in Atelier Robin function generator format, for *Fur Elise* to be "played" on a plasma tube device that can be heard when operating in the 1000-3000Hz range. It

starts with the first note for an additional 10 seconds to allow a short time for the device to be tuned when it is first started. It ends with 3 minutes of 1760Hz making the total time 212 seconds.

Hulda Clark Frequencies

Hulda Clark frequencies, as published in her books such as *The Cure for all Diseases*, are all above audio range - from 71KHz to above 1MHz. They are specified by her to be run on a sine wave frequency generator. Plasma tube devices like Rife-Bare or EMEM cannot run these frequencies directly. One way to convert the frequencies for use on an audio range function generator is to repeatedly divide by two until they are in range. Another method, reported by Jeff Sutherland to be more reliable, is called Scalar Harmonics. This is to divide the frequency by e raised to the 3rd or 6th power where e equals the natural logarithm constant, also known as Euler's Constant, 2.71828183. The following list uses e raised to the 6th power (S6) to perform the calculation since all the results are below 10KHz. Clark's frequencies are typically provided as a range (high and low) plus a "use" frequency in between which is specified by her to be the most effective.

On pathogen names appended with _1, _2, _3, etc, Clark provides more than one "use" frequency and all of these should be used. Sets annotated with 2nd, 3rd, 4th, etc, indicate she found more than one range for the pathogen. This list is provided on the Electroherbalism website where the S3 scalar harmonic frequencies are also included.

Tapeworm Frequencies. Tapeworms are segmented. The first segment is the head, called the scolex. Tapeworms grow by adding a new segment to their body. Tapeworms can have very large bandwidths (range of frequencies), and it varies by the length of the specimen! It is as if each new segment has a unique, and slightly lower, frequency. Do not use a frequency generator to kill tapeworms. If you accidentally kill middle segments instead of working your way up from the bottom, you may conceivably promote dispersion! Use only a zapper. (Editor's Note: By this, Clark means to use only a device producing a pulsed DC square wave (not an AC sine wave) output. It should be fine to use a square wave generator sweeping the lower to upper range)

=====

The following list was researched by Dr. Toshihiko Yayama in Japan. He used the F-Scan with reagents and patients with known metal poisoning.

Frequencies have been rounded to the nearest 100 Hz. To test for metals, a DIRP is done from 30,000-60,000 Hz in 100 Hz steps. The mercury frequency has been confirmed by others. These frequencies are intended for research in detecting the presence of metals. They are not intended for use as treatment. Treatment should include chlorella and other materials as needed.

Cross Reference List of CAFL Frequencies

The CAFL Cross Reference (CAFL XREF) is a compilation of all the conditions in the Consolidated Annotated Frequency List indexed by frequency. It has limited utility for the most popular frequencies such as 20, 728, 800, 880, 1550, and 10000 since so many conditions are listed, but it can be helpful when running scans and sweeps to possibly indicate frequency sets which may be useful as well as sometimes identify commonality of the causative pathogens of various diseases.

The original cross reference list of the CAFL was produced by Stone Circle Alternatives in the late 1990s. Now, after almost 10 years, a new cross reference list has been produced. Many thanks to Lee George for his help on this project. The CAFL XREF is included in the third edition of the Electroherbalism Frequency Lists, shown at right.
